

Magnet Man Schedule

Weeks 1–2

Learn Unity + C# Basics

Focus:

- Unity interface
- GameObjects/components
- Scenes
- C# basics
- Player movement
- Basic physics

Goals:

- Setup GitHub repo
- Create playable first-person controller
- Learn Unity workflow
- Make a simple test room

End Result:

Walk around a 3D environment

Weeks 3–4

Prototype Magnetism System

Focus:

- Rigidbody physics
- Vector math
- Attraction/repulsion
- Force application

Goals:

- Create polarity system
- Push/pull mechanics

- Magnetic surfaces
- Test movement interactions

End Result:

Magnetic movement prototype working

Weeks 5–6

Build Core Gameplay Systems

Focus:

- Puzzle mechanics
- Interactions
- Triggers
- Doors/switches/platforms

Goals:

- Create reusable puzzle components
- Build first puzzle rooms
- Improve movement feel

End Result:

First playable puzzles

Weeks 7–8

Expand Gameplay + Level Design

Focus:

- Puzzle progression
- Combining mechanics
- Level flow

Goals:

- Build full puzzle chambers
- Add advanced movement challenges
- Improve visual readability

End Result:

Playable vertical slice level

Weeks 9–10

Art, Audio, and Polish

Focus:

- Lighting
- Materials
- Sound effects
- UI
- Visual feedback

Goals:

- Create visual identity
- Add effects/audio
- Improve atmosphere
- Polish movement and interactions

End Result:

Game feels cohesive and polished

Weeks 11–12

Optimization + Final Submission

Focus:

- Bug fixing
- Optimization
- Final presentation

Goals:

- Fix physics issues
- Clean up code/project structure
- Record gameplay
- Finalize README/documentation

End Result:

Complete playable project ready for submission
